

Soap Making Basics

Q: What is soap?

A: A product of a chemical reaction between fats and lye.

Q: What is saponification?

A: The process of turning oil and lye into soap.

Q: What are the basic soap ingredients?

A: Oils/fats, lye, and water.

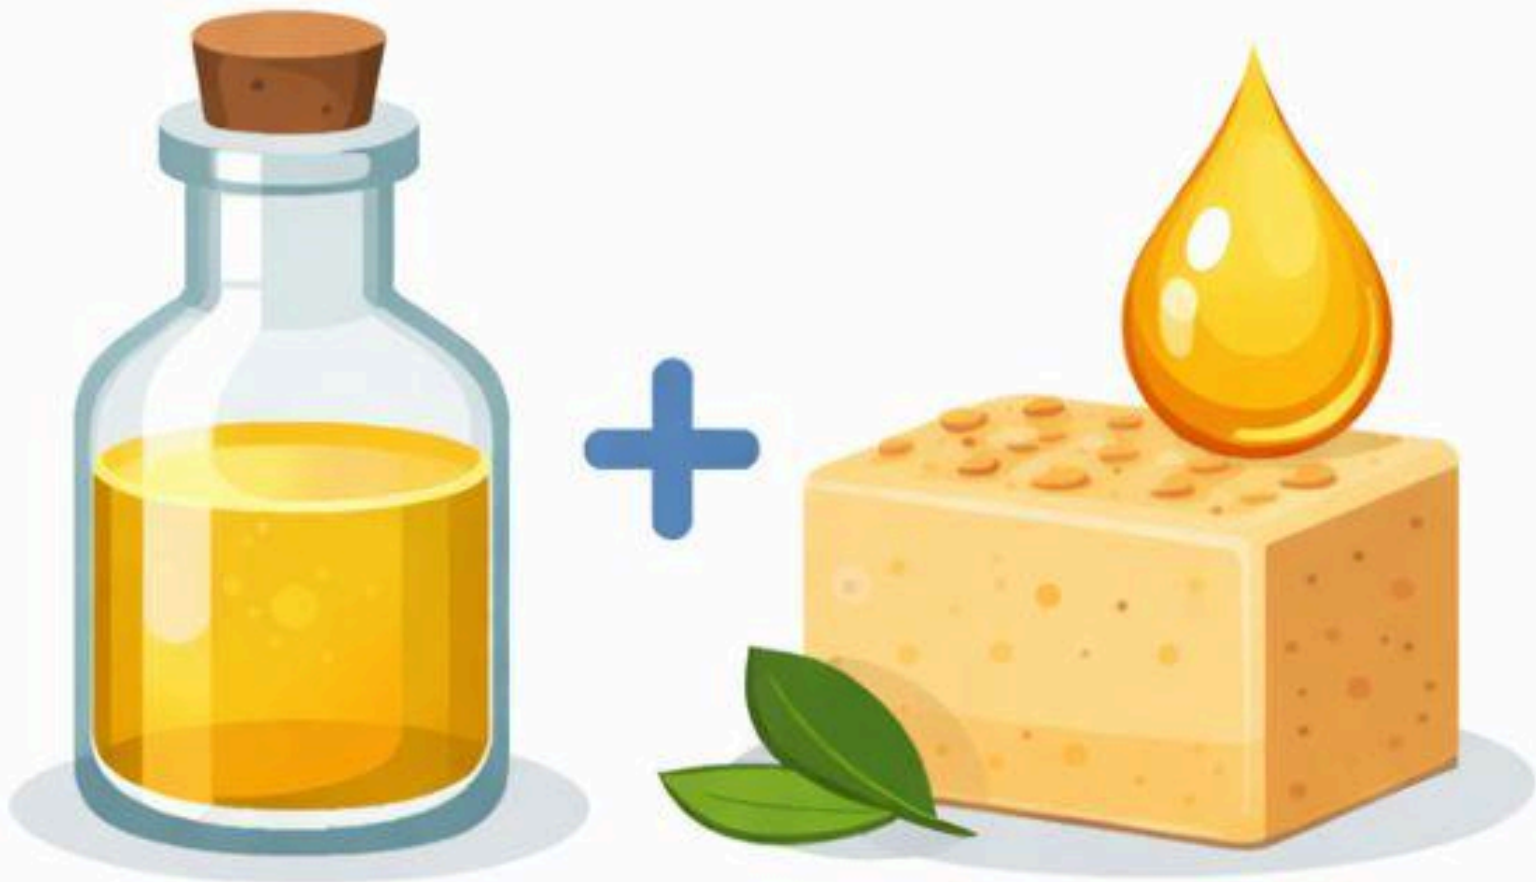

Q: What is lye?

A: Sodium hydroxide used in cold/hot process soap.

Q: What is superfatting?

A: Adding extra oils to make soap more moisturizing.

Q: What is trace?

A: The point where oils and lye emulsify.

Q: What is curing?

A: Letting soap dry to harden and complete saponification.

Q: What is cold process soap?

**A: Made by mixing oils and
lye without cooking.**

Q: What is hot process soap?

A: Made by heating the mixture to speed up saponification.

Q: What is melt and pour soap?

A: Pre-made soap base that is melted and customized.
